Month 7

## combining HTF Monthly & Weekly Ranges :-

### Short term trading :-

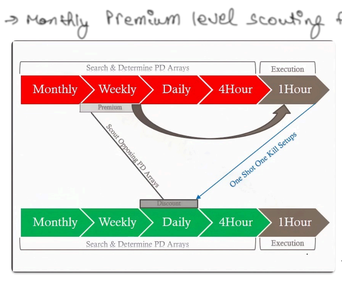
→ The Practice of Trading a duration of one week to a few days.
→ using both monthly & weekly charts to frame the setup.
→ we trade in the direction of the present or next week's range.
→ understanding of the weekly range is essential.
→ The short term Model can be both Trend or Range based.
→ Trades that are clear to see forming are the goal - not forced
→ short term trading is the highest probability discipline
→ Frequent setups & consistency provides a plethora of trades.

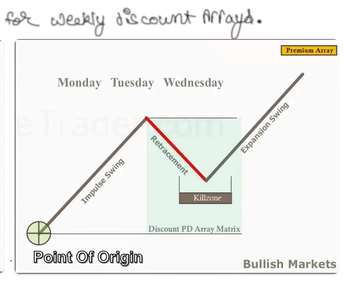
### HTF Sequence :-

Monthly → Weekly → Daily → 4Hour → 1Hour
(Monthly → Weekly → Daily → 4Hour : search & Determine PD Arrays ; 1Hour : Execution)

Determine All PD Arrays from Monthly, Weekly & Daily Timeframes.

→ Monthly Premium level scouting for weekly discount Arrays.





### The General Concept Revisited :-

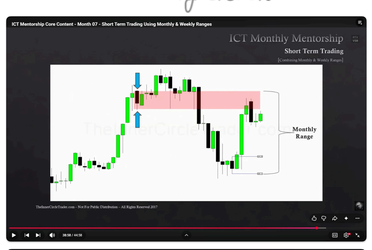
- Market is poised to trade Higher on HTF
  (i) Seasonal Tendency
  (ii) Interest Rate Driven
  (iii) Commitment of Traders
  (iv) Intermarket Analysis supports Bullishness
- Market Rallies higher then retraces Mon-Wed
- Market expands up to Higher highs

### Monthly Ranges :-

→ Price is fractal and HTF analysis benefits us as a result.
→ We note the High & Low on every monthly candle.
→ Note the present range in terms of Premium or Discount.
→ Consider where price on the monthly will or could draw to.
→ There is generally 4 weekly candles in every Monthly candle
→ Each week we study where the Monthly will likely trade next.
→ Using Monthly Ranges we frame trades on the weekly range.

### Weekly Range :-

→ Price is fractal and Monthly analysis builds on the weekly.
→ We note the high & low on every weekly candle.
→ Note the present range in terms of Premium or discount.
→ Consider where price on the weekly will or could draw to.
→ There is generally 5 daily candles in every weekly candle.
→ Each week we study how the weekly trades in Monthly range
→ Using weekly ranges we frame trades on daily chart.



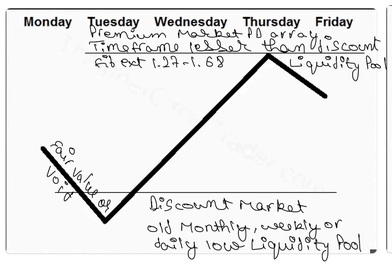
## Defining the weekly Range Profiles :-

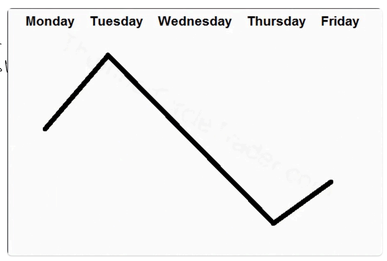
### classic tuesday Low of week :-

→ The Profile :- Bullish

→ Manipulation :- Hovers above a HTF Discount array Monday then drops into the HTF Discount Array on tuesday to form the low of the week.

→ How to Anticipate :- know the HTF Discount Arrays and when market fails to drop into that array - odds are tuesday will likely to see the drive lower tuesday london or new york session.





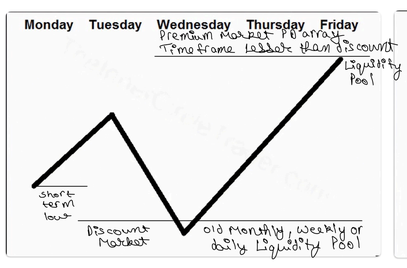
& Vice Versa for classic tuesday high of the week

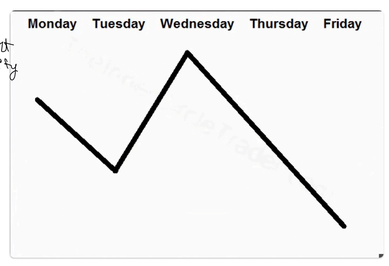
### Wednesday Low of week :-

The Profile :- Bullish

Manipulation :- Hovers above a HTF Discount Array Monday & Tuesday then drops to HTF Discount arrays on Wednesday to form the low of the week.

How to Anticipate :- know the HTF discount arrays and when the market fails to drop into that array - odds are wednesday will likely to see the drive lower wednesday london or New York session. Monday and Tuesday can be down days as well & form this profile.



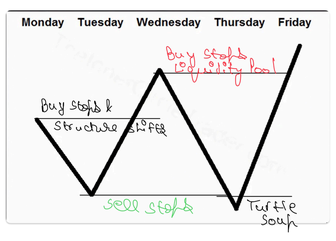


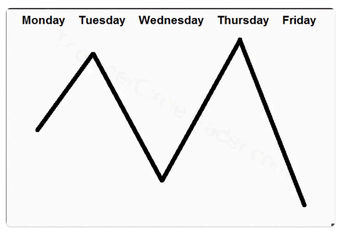
## consolidation Thursday Reversal :-

The Profile :- Bullish

Manipulation :- consolidates Monday through wednesday then runs the intra week low and rejects it forming a market reversal.

How to Anticipate :- know the HTF discount Arrays and when the market fails to drop into the array - odds are Thursday will likely see the drive lower Thursday on a Market Driver news or Rate release late New York session around 2:00 PM EST.



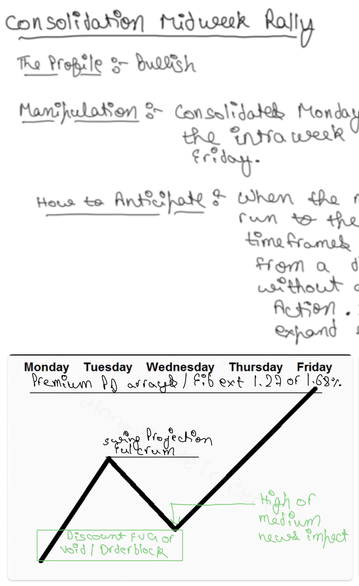


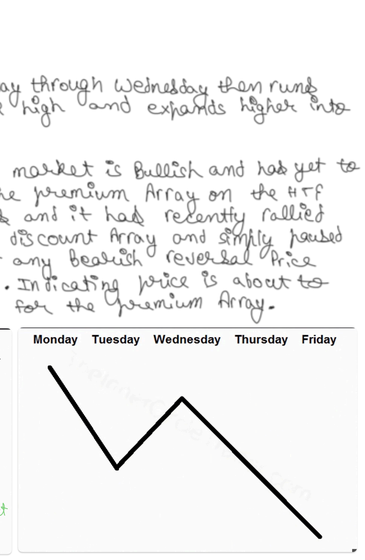
## consolidation Midweek Rally

The Profile :- Bullish

Manipulation :- consolidates Monday through Wednesday then runs the intra week high and expands higher into Friday.

How to Anticipate :- when the market is Bullish and has yet to run to the premium Array on the HTF timeframes and it has recently rallied from a discount Array and simply paused without any Bearish reversal Price Action. Indicating price is about to expand for the premium Array.



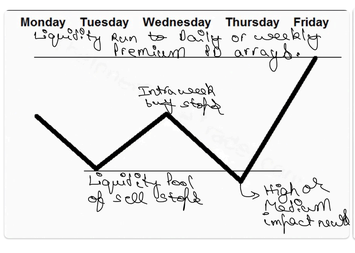


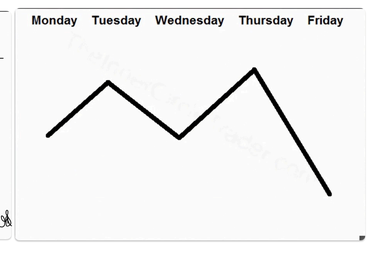
## Seek & Destroy Bullish Friday :-

The Profile :- Neutral - Low Probability

Manipulation :- consolidates Monday through Thursday - running shallow stops under and above the intra week highs - then runs the intra week high and expands higher into Friday.

How to Anticipate :- when the market is awaiting Interest Rate Announcements or Non-Farm Payroll can create this profile in the summer months of July & August. better to avoid trading these conditions.



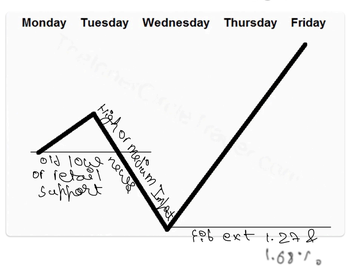


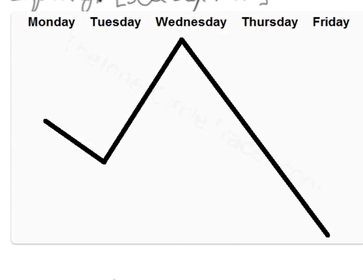
## Wednesday Weekly Reversal :-

The Profile :- Bullish

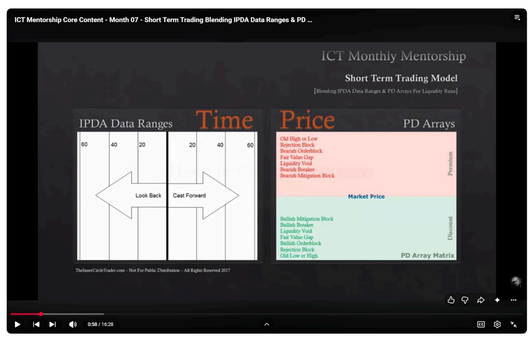
Manipulation :- consolidates Monday through tuesday - drives lower into a HTF Discount Array to induce sell stops then strongly reverses.

How to Anticipate :- when the market is trading at a long term or intermediate term low - price will pair Institutional buying with pending sell side Liquidity. [sell stop Raids]



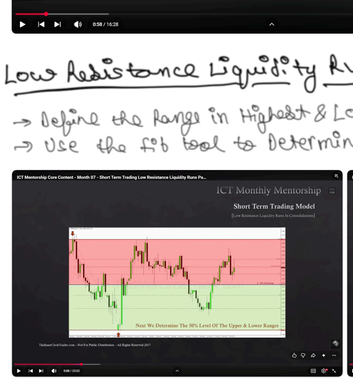


## Blending IPDA Data Ranges & PD arrays for Liquidity Runs :-

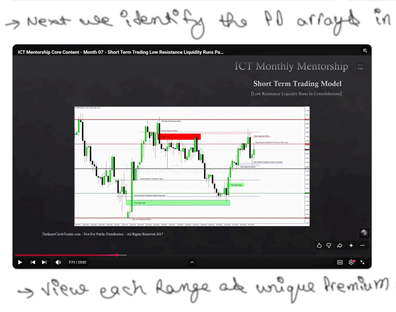


## Low Resistance Liquidity Runs in consolidations :-

→ Define the range in Highest & Lowest candlestick bodies.
→ Use the fib tool to determine 50% of the Range & Note it.



→ Next we identify the PD arrays in each new range.

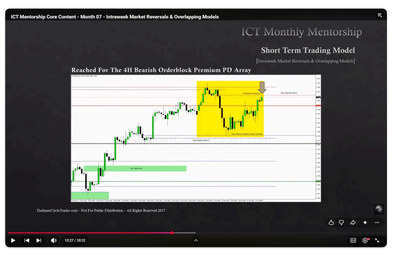


→ View each Range as unique Premium & Discount Trading Ranges.

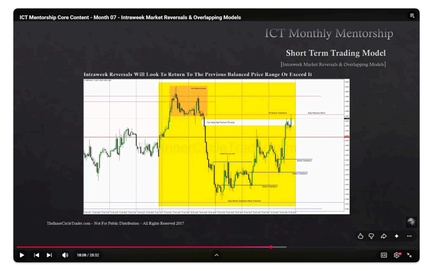
## Low Resistance Liquidity Runs in Trending Conditions :-

Each week the Market will seek to trade from one PD Array to another. It will trade from one quadrant to another with the least resistance, Premium to discount or discount to Premium Market Valuation.

## Intraweek Market Reversals & overlapping Models :-



→ This price decline, the speed at which and the magnitude of which it moves is the sign that its characteristics that leads you to, we are moving really quickly & covering a lot of ground in the beginning of the week. Whenever that happens, you immediately start looking for HTF PD Arrays that may cause & be a catalyst for intraweek market reversal profile.



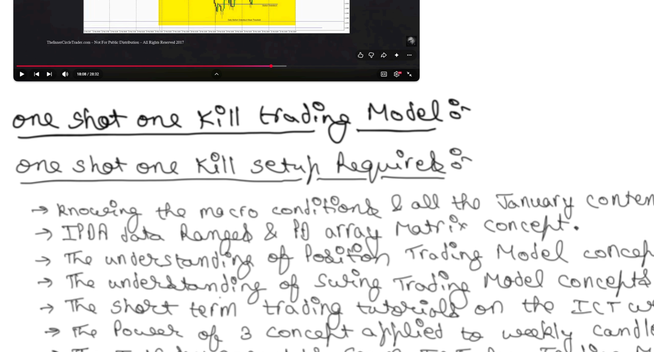
## one shot one Kill trading Model :-

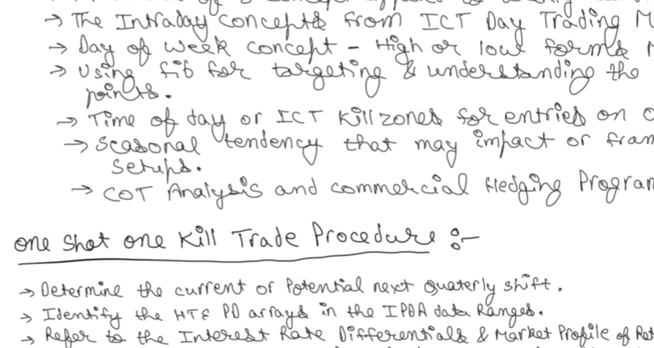
### one shot one Kill setup Requires :-

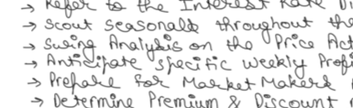
→ Knowing the macro conditions & all the January content lessons.
→ IPDA data Ranges & PD array Matrix concept.
→ The understanding of position Trading Model concepts.
→ The understanding of swing Trading Model concepts.
→ The short term trading tutorials on the ICT website
→ The Power of 3 concept applied to weekly candles or Ranges.
→ The Intraday concepts from ICT Day Trading Model.
→ Day of week concept - High or low forms Mon-wed 70% time
→ using fib for targeting & understanding the correct price points.
→ Time of day or ICT Killzones for entries on OSOK setups
→ Seasonal tendency that may impact or frame directional setups.
→ COT Analysis and commercial Hedging Programs.

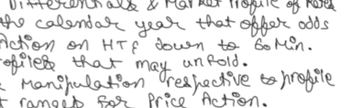
### one shot one Kill Trade Procedure :-

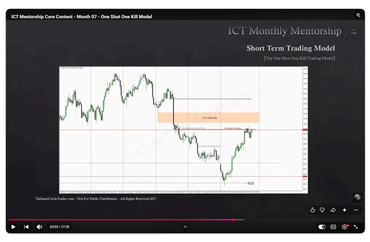
→ Determine the current or potential next Quarterly shift.
→ Identify the HTF PD arrays in the IPDA data Ranges.
→ Refer to the Interest Rate Differentials & Market Profile of Rates
→ Scout Seasonals throughout the calendar year that offer odds
→ Swing Analysis on the Price Action on HTF down to 5 Min.
→ Anticipate specific weekly Profiles that may unfold.
→ Prepare for Market Makers manipulation respective to profile
→ Determine Premium & Discount ranges for Price Action.
→ wait for Volatility to signal a High odds of large ranges.
→ Refer to COT and Open Interest to confirm Smart Money Action.
→ Frame a low Resistance Liquidity Run with opposing PD arrays.
→ Use Fib to converge with opposing PD arrays and Time&Price
→ Confirm trade setups with Intermarket Analysis.

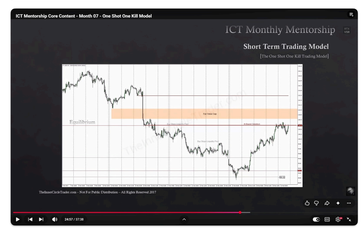












↳ Look at the last year & look for highest high and lowest low of their commercial Activity.
